Smart End Point Assessment

Smart End Point Assessment is the first technology exclusively designed for organisations registered to deliver End Point Assessments to manage them with rigour and efficiency. SEPA creates a modern end point assessment experience, for apprentices, training providers, employers, and end point assessors.

SEPA manages every aspect: from importing summative portfolios, to recording evidence of the end point assessment, managing centre resources, validating competencies of your end point assessors, through to standardisation and compliance for external moderation. SEPA also manages conflicts of interest between apprentices and assessors through the conflict-of-interest questionnaire, to ensure that Assessors aren't being matched with apprentices where there is a conflict of interest.

Allowing you to Input learner, assessor, employer, and training provider details easily, manage the standard and configure how you deliver the EPA within one easy to use system.

Explore how SEPA can further support your EPA needs, today.

Configure:
We understand that every EPAO operates differently with clients and learners. SEPA allows the EPAO to completely configure their use of SEPA and end to end EPA management systems whilst managing the audit risk associated with EPAs.

Bespoke:
Easily allocate and schedule EPAs with bespoke learner checklists with SEPA. This is fundamental because it won't allow staff to book an EPA for a learner if the checklist isn't complete.
Reporting:
SEPA coordinates the whole end to end learning journey for end point assessments and follows the same interface throughout the software, regardless of job role or permissions assigned.

Manage:
SEPA manages every aspect and process of end point assessments and resits, including resources and contracts.

Connected:
Easily connect SEPA with other systems and upload data within one easy to use place.

Automated systems:
Where you can manage assessor, apprentice, employer, and training provider data, and any conflicts of interest.
