

## Advanced ALB Hosting and Managed Services

Our Managed Hosting Services provide a secure, high performance operating environment for Advanced ALB practice and case management

Advanced Managed Hosting Services are delivered from UK data centres, and are monitored 24/7 to offer your firm complete peace of mind. As a user of ALB, you have access to a reliable service that's been designed to provide a modern and secure infrastructure that meets the requirements of legal firms.

Hosting ALB with Advanced will provide you with a single point of service and support. Our hosting services are designed to be the right size and cost for your current business needs, while maintaining the flexible scalability that can easily meet any future requirements.

### Security as a priority

Our security services help keep your business protected, reduce risk and maintain legislative and compliance requirements.

A good security strategy goes beyond the services and controls that protect your intellectual property. The best strategies demonstrate that your firm has the correct mechanisms in place to protect your customers, and our security services do this.

Our Perimeter Security Service provides a pre-emptive approach to network security which adds an essential layer of network threat detection and prevention, protecting your organisation from a wide range of cyber-attacks.

### Stable connectivity

Connectivity is critical to any complete managed services solution. At Advanced, our data centres have a fully diverse fibre duct infrastructure, which fully meets the requirements of most of the fibre owner / operators in the market.

Having these fibre owners in the data centres helps ensure that we can easily connect with every other possible carrier or related supplier. We support direct connectivity to multiple carriers for both WAN and internet services.

# Advanced ALB Hosting and Managed Services

## Why chose Advanced Hosting Services?

- Secure, flexible and scalable infrastructure in Tier-3-aligned, geographically dispersed UK data centres
- An integrated managed solution, delivering predictable performance
- Single point of contact for ALB applications and outsourced IT services, offering a one-stop support solution
- Service choices based on performance requirements and desired investment level across disaster recovery, availability and recovery point objectives
- Secure, always-on environment that is accessible from anywhere
- Comprehensive managed backup, helping to ensure your data is always protected
- Delivers proof of service via SLAs
- A unique end-to-end solution for all applications and infrastructure
- Deployed in reliable, stable and fault-tolerant environments with ongoing investment

## Technical benefits

- Access latest high-performance technology
- Protection of data and investments by removing single points of failure
- Consistent IT support services with physical access to server data centres and infrastructure

- All aspects of hosting are fully managed
- Takes care of all capacity management, allowing services to grow unconstrained
- Energy-efficient, fault-tolerant data centres, provide environmental benefits compared to running multiple server rooms
- Delivered in accordance with ISO 27001:2013 controls, helping to ensure security risk mitigation
- Enhanced implementation timescales compared to traditional on-premise deployment

## Commercial benefits

- Predictable monthly charges, reducing unforeseen operational expenditure
- Rapid implementation, allowing for a fast return on investment
- Scalability offers cost transparency and predictability
- Centralised hosting saves the cost of running multiple, disparate server rooms
- No overheads for:
  - » Infrastructure renewal, such as the software and hardware that make up the service
  - » Facilities costs: power, cooling and physical space
  - » Insurance
  - » Staff to maintain infrastructure 24/7
