

ALB integration with Cloud Forms

Your firm can now easily move up to the next generation of legal form technology

Our experience and knowledge of the UK legal market has allowed us to support our clients in meeting the challenges involved with transforming from paper to digital work methods.

ALB's latest integration offers firms the opportunity to move smoothly from Laserform desktop software to a Cloud Forms platform that can be launched directly from within ALB. Moving to the Cloud is a significant step forward and will help legal practices elevate the functionality of their legal form library, while maintaining the familiarity of their current desktop software.

Cloud Forms is a futureproof, secure platform that surpasses all the benefits of traditional forms software by offering forms in both paper and digital format. As a Cloud solution, it's available 24/7 from a web enabled device, allowing work to be monitored and controlled remotely whenever required.

Managed submissions

By Using Cloud Forms, your firm will have the advantage of being able to send digital submissions directly to Companies House (mortgage, company secretarial and persons of significant control filings), HMRC for Stamp Duty and Land Registry. In future, as additional agencies move to digital, we'll automatically manage that transition for you.

Risk management

A robust submission platform manages critical deadlines for you and decreases the risk of form rejections by allowing pre-approved authorisers to review and sign-off all information before submission. When completed, every form has a full audit trail for review.

Hassle-free integration

There's no need for any further development work within ALB and no need to replace forms that sit within your current agendas or workflows. Existing Laserform and ALB alignments will automatically carry across to their Cloud Forms equivalent, without the need for additional custom mappings.

Easy collaboration

Not only will Cloud Forms technology allow you to set up internal working teams across multiple locations, it also enables smooth client collaboration. This compelling improvement for the management and sharing of forms allows a quick return of completed forms and faster matter turnaround.

Historic form access

You'll retain access to historic forms as all pre-existing documents will continue to open in Laserform desktop. You can also save previous forms in bulk, in PDF format, and save them in ALB's system history.

ALB integration with Cloud Forms

Automated updates

Form updates will no longer be an issue, as they are delivered quickly and remotely, without any disruption to users. This enhances compliance by ensuring the correct form version is always used and eases the burden on your IT team.

Enhanced productivity

Cloud Forms provides the time-saving functionality you expect. This includes single sign-on, expanding or adding rows to fit the data you need and auto calculations to reduce the risk of user error.

Using the system is easy, and a modern, intuitive design means training requirements are minimised. If a user does need assistance, they can click the links to Cloud Forms help and FAQ pages, and our support team is also available to handle any queries.

Robust security

Cloud Forms is safeguarded by the latest security technology and the highest levels of expertise.

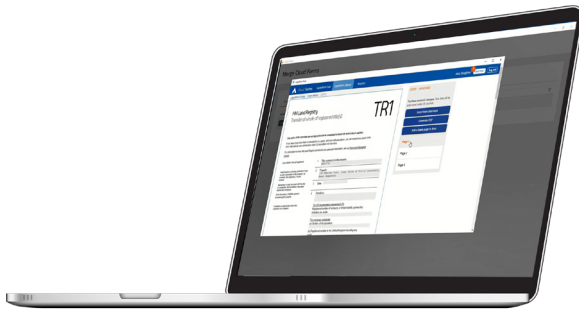

Whether you suffer a cyberattack, experience fire or flood or lose your laptop, your documents are protected and remain secure and accessible to authorised users.

Key benefits:

- > Easy transition to Cloud for current desktop software users
- > Application moves off-premise, removing the requirement to roll out, store, upgrade, manage and maintain the software onsite
- > Flexible work resourcing and management
- > No additional field mapping required for Laserform user firms
- > Improved accuracy and performance
- > Easy form collaboration with colleagues and clients
- > Improved management of the risks associated with rejected submissions
- > Robust security protects your data
- > Futureproof Cloud technology

"The courts started insisting on digital documents some time ago, and the impact of this on our court work for criminal and family law would have been difficult had we not progressed to ALB."
